## TEST REPORT CERTIFICATION

Applicant

Rondish Company Limited

Manufacturer

Rondish Company Limited

Product

Wristband Transmitter

FCC ID

WNG-TXP-02

(A)Model No.

: TXP-02

(B)Power Supply : DC 3V

(C)Test Voltage : DC 3V

Tested for comply with:

FCC CFR 47 Part 15 Subpart C

Test procedure used:

ANSI C63.10: 2013

The device described above is tested by AUDIX TECHNOLOGY (SHENZHEN) CO., LTD. to confirm comply with all the FCC Part 15 Subpart C requirements.

The test results are contained in this test report and AUDIX TECHNOLOGY (SHENZHEN) CO., LTD. is assumed full responsibility for the accuracy and completeness of these tests. This report contains data that are not covered by the NVLAP accreditation. Also, this report shows that the Equipment Under Test (EUT) is to be technically compliant with the FCC requirements.

This report applies to above tested sample only. This report shall not be reproduced in part without written approval of AUDIX TECHNOLOGY (SHENZHEN) CO., LTD.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government.

## 4.2.Block Diagram of Test Setup

For frequency range 30MHz-1000MHz

For frequency range above 1GHz

#### 4.3. Radiated Emission Limit Standard: FCC 15.209 and 15.231

| Fundamental    | Field Strength of    | Field Strength of Spurious |
|----------------|----------------------|----------------------------|
| Frequency(MHz) | Fundamental          | emissions                  |
| 433.92         | QP:80.83dBuV/m at 3m | AV:60.83dBuV/m at 3m       |
|                | distance             | distance (Above 1GHz)      |
|                |                      | PK:80.83dBuV/m at 3m       |
|                |                      | distance (Above 1GHz)      |
|                |                      | QP:60.83dBuV/m at 3m       |
|                |                      | distance (Below 1GHz)      |

Note: The spurious emissions appearing within the frequency band listed in 15.205 Shall also comply with limits shown in section 15.209

### 4.4.EUT Configuration on Test

The following equipment are installed on Radiated Emission Test to meet the commission requirements and operating regulations in a manner which tends to maximize its emission characteristics in normal application.

### 4.5. Operating Condition of EUT

- 4.5.1. Setup the EUT and simulator as shown as Section 4.2.
- 4.5.2. Turn on the power of all equipments.
- 4.5.3.Let EUT work in Tx mode.

#### 4.6.Test Procedure

The EUT and its simulators are placed on a turn table, which is 0.8 meter high above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna, which is mounted on a antenna tower. The antenna can be moved up and down between 1 meter and 4 meters to find out the maximum emission level. Broadband antenna (calibrated bilog antenna) is used as receiving antenna. Both horizontal and vertical polarization of the antenna is set on Test. In order to find the maximum emission levels, all of the interface cables must be manipulated according to ANSI C63.10-2013 on radiated emission Test.

During the pretest the EUT was rotated through three orthogonal axes to determine the attitude that maximizes the emissions

After that the EUT was manually handled to find the orientation that has the maximum emission, which is the orientation show in the test setup photos.

The bandwidth of the EMI test receiver (R&S ESR7) is set at 120kHz for frequency range from 30MHz to 1000MHz.

The bandwidth of the Spectrum's RBW is set at 1MHz and VBW is set at 3MHz for peak emissions measurement above 1GHz

This device is pulse modulated; a duty cycle factor was used to calculate average level based measured peak level.

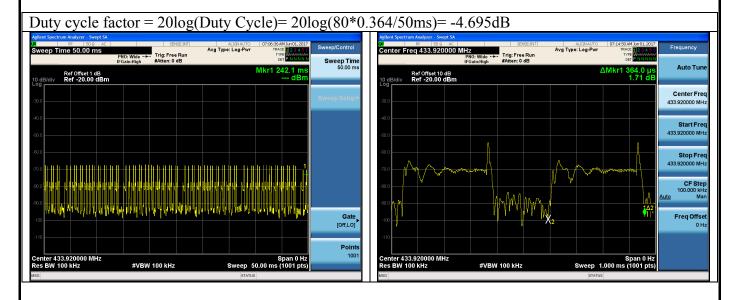

#### 4.7. Radiated Emission Test Results

#### PASS.

Note: The emission in the restricted Bands in section 15.205 comply with the 15.209 general limit.

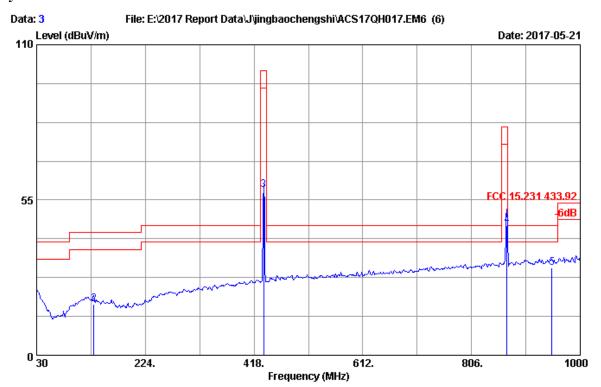

The frequency range from 30MHz to 5000MHz was investigated. When PK measured Levels comply with average limit, then the average levels were deemed to comply with Average limit.

Note: The duty cycle factor for calculate average level is -4.695dB, and average limit is 20dB below peak limit, so if peak measured level comply with average limit, the average level was deemed to comply with average limit.

| TX               | 433.92          | 182.7                    | ≤ 1.0848       |
| Conclusion: PASS |                 |                          |                |

# 7. ANTENNA REQUIREMENT

**RESULT**: PASS

Test Date : May.16~Jun.01,2017

Test standard : FCC Part 15.231

Limit : the use of antennas with directional gains that do not exceed 6 dBi

According to the manufacturer declared, the EUT has an PCB Antenna, the directional gain of antenna is -5dBi, and the antenna connector is designed with permanent attachment and no consideration of replacement. Therefore the EUT is considered sufficient to comply the provision.

# 8. RADIO FRREQUENCY EXPOSURE COMPLIANCE

**RESULT**: PASS

Test standard : FCC KDB Publication 447498 D01 V05

Since maximum peak output power of the transmitter is<10mW, i.e.0.0000011507mW<10mW, hence the EUT is excluded from SAR evaluation according to FCC KDB Publication 447498 D01: General RF Exposure Guidance V05.
